The primary purpose of those who make use of the public airways is to provide information in "the Public good". That should not be 1 minute of information followed by 2 minutes of commercials and another 15 to 30 second spot telling us of what sweet nugget of information they will tell us right after another 1 minute of commercials. I switched to XM radio because I was tired of the bombardment of advertising provided by the traditional radio networks. The only other radio venue I regularly listen to is NPR (National Public radio).

So please listen to the end user, not the lobbyists who are using you, and we the public, to feather their "constituents' bed".
